

COCHREN

FOUNDATION AND REPAIR COMPANY

Foundation Wall Deterioration and Replacement

Freeze-thaw cycles can play havoc with foundation walls that were built with older building materials. Poor mix design & quality control results in a limited life span of foundations.

Foundations undergoing excessive spalling presents a unique challenge for any contractor to provide a cost effective solution. Accessibility, interior finishes, depth of spalling, the residual capacity of the wall and most important the experience of the crew.

Over the years Cochren Foundation and Repair have successfully restored many spalling foundations.
